

The Space Between Us

balls of gas
from colorful nebulas
an empty arena of nothingness
the beauty in the blank darkness

it's an interesting concept
how something so unconventionally beautiful
is the most breathtaking, and world-altering thing.

it has healed the hearts of many
made people feel emotions they were never used to
and scientifically changed the world

but was the price of it all, worth it in the end?

the space between us can be the space that unites us.

the largest ball of gas,
beaming on the island of trash,
it lays on the bed of the nations most beloved temple.
never being collected
never being thought of

the young, forgotten children
inhale the polluted air
on their way to get
some sort of an education

what is wrong with the elite
refusing to answer to our cries
our nation is just as beautiful
as the stars that are in the sky
